

electrolysis goes hi-tech

SPOTLIGHT ON ELECTROLYSIS GOES HI-TECH

Electrolysis has gone hi-tech. It is hair removal using digital technology combined with sophisticated techniques and advanced cosmetic procedures.

Electrolysis remains the only permanent way of removing hair. In the past it was perceived as the only beauty treatment with a level of discomfort. But times have changed. Botox, fillers, micro pigmentation and needling are now common on the high street. The belief of 'no pain no gain' means that electrolysis is more acceptable.

It is considered a treatment which is comfortable and, at worst, causes 'mild discomfort'. Advances in electrolysis machinery and needles, and the development of new modalities and techniques have contributed to this positive change.

A good electrologist will have at her (or his) fingertips the ability, using modern technology and techniques, to ensure the

treatment is as comfortable as possible. Every modern laser clinic should have a qualified, highly-skilled electrologist for complete patient satisfaction, or know a good one you could recommend.

The effectiveness and comfort levels depend on the skill of the electrologist. Look for CPD certificates with a reputable company such as Sterex. Members of the British Institute & Association of Electrolysis must pass practical and written exams to ensure standards of excellence.

Sterex training department is highly respected throughout the industry

They offer diverse training programmes including:

Advanced Cosmetic Procedures course

A two-day and one-day intensive programme featuring training on a wide diversity of skin blemishes including Telangiectasia (also minor vessels on the legs) cherry angiomas, milia, all warts including verrucas, dermatosis Papulosa Nigra, small sebaceous cysts and scar reduction.

Advanced Electrolysis course

The first step into using electrolysis for minor skin blemishes.

Transgender course

Transgender clients are a massively growing market. The average transition age of 42 years means many will have white and grey hairs for which electrolysis is an option. Sterex has pioneered a two-day specialised course offering insight into the transgendered patient's 'journey'.

Refresher Courses

Designed to support, guide and educate for all standards. There is something suitable for everyone.

Beginners' Course

Sterex offers the international VTCT qualification for you or your staff to become a fully qualified electrologist to further develop your business.
